

Damp and mould, handled and evidenced.

A defined process from the first report to the final check, with every step recorded so you can show the Regulator what was done and when.

WHY IT MATTERS NOW

Awaab's Law sets fixed timescales for social landlords to investigate and fix hazards. It has applied to damp and mould and to emergency hazards since 27 October 2025. From 30 November 2026 it extends to further hazards including excess cold and heat, falls, fire, electrical and structural hazards. The government plans to extend it to the remaining hazards in 2027.

The legal duty stays with the landlord. EVO's job is to help you meet the timescales and hold the evidence that you did.

The timescales

Hazard	What must happen	Timescale
Emergency	Investigate and make safe	Within 24 hours
Significant	Investigate	Within 10 working days of becoming aware
Significant	Written summary to the resident	Within 3 working days of the investigation ending
Significant	Safety works	Within 5 working days of the investigation ending
Significant	Further preventative works	Start within 5 working days, or physically start within 12 weeks where that is not possible

How we handle every case

1

Report

The resident reports damp or mould in the EVO Living App, or by phone, in the same way as any other repair. We notify you as soon as it arrives, and log, triage and time-stamp it.

2

Assess

We survey the affected area, take moisture readings and photographs, and carry out a risk assessment. You receive a written report with our findings and any further works we recommend.

3

Treat

We remediate using our three-stage treatment.

4

Monitor

We check the property afterwards to stop it coming back, and repeat cases are tracked as a measure in their own right.

The three-stage treatment

1

Clean and sterilise

A fungicidal treatment removes surface staining across the affected area and one metre beyond it in every direction, without scraping, which can release spores. The area is then ventilated and left to dry for at least 24 hours.

2

Protect

A clear mould-resistant sealant is applied over the area and one metre beyond it, blocking stains and protecting against regrowth.

3

Paint

A mould-resistant finish containing fungicide is applied. We use a wipeable, water-resistant finish in kitchens and bathrooms, and a matt finish elsewhere.

We do not paint over damp. Before stages 2 and 3, the surface is checked with a moisture meter. We only continue once it reads 20% or below. If it is wetter than that, it is left to dry further.

What we measure: our service targets

100%

SERVICE TARGET

Damp and mould inspections attended within 10 working days of the report, in line with Awaab's Law

100%

SERVICE TARGET

Remedial works completed within the prescribed timescale

Below 5%

SERVICE TARGET

Repeat cases within six months

Every report, reading, photograph and action is recorded in the EVO Dashboard as it happens, in a form you can use for your statutory reporting, Tenant Satisfaction Measures and Housing Ombudsman requirements.

How it is charged

Damp and mould sits outside the repair plans, so it is never squeezed into a threshold. The initial visit (survey, moisture readings, the first treatment stage and a written report) is a fixed charge. Any further treatment or remediation is scoped and quoted, and only goes ahead with your approval.

Seeing damp or mould at home?

Residents can report it in the EVO Living App. Choose the category, describe what you can see and add a photo. You will get a reference number straight away.
